EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Timothy J. Bechen, Reg. No. 48,126 on June 16, 2008.

2. The application has been amended as follows:

Claim 2 is deleted in entirety and is replaced it with the following:

"A method for determining a topology of a network, the method comprising:

communicating with a first router in the network;

querying a first link state database of the first router for first Type 1 and Type 2 link state advertisements in a first area;

importing the Type 1 and Type 2 link state advertisement into a network topology information database; and

sweeping all networks in the first area announced by the first router and which make Type 3, Type 4, Type 5 or Type 7 announcements."

Claim 6 has been canceled.

Claim 7, line 1, "The method as recited in claim 6" has been amended to "The method as recited in claim 2".

REASONS FOR ALLOWANCE

3. Claims 2-5, 7-17 allowed over prior arts made of record.

4. The following is an examiner's statement of reasons for allowance: The prior art made of record does not teach or fairly suggests in combination steps of querying a first link state database of the first router for first Type 1 and Type 2 link state advertisements in a first area; importing the Type 1 and Type 2 link state advertisement into a network topology information database; and sweeping all networks in the first area announced by the first router and which make Type 3, Type 4, Type 5 or Type 7 announcements.

The prior art further fails to teach in combination querying the first router for a first area identifier; determining whether the first router is an autonomous system boundary router based on the first area identifier; and when the first router is an autonomous system boundary router, querying the first router for networks directly connected to the first router and ignoring all other Type 5 announcements in the first link state database.

The prior art made of record fails to teach in combination steps of importing the first Type 1 and Type 2 link state advertisements into a first network topology information database; query the first router for a first area identifier; determining whether the first router is an area border router based on the first area identifier; when the first router is an area border router, querying the first router for other areas bordered by the

first router; and importing topologies of the networks in the other areas into the network topology information database.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure.

Luciani (US 6,418,476 B1) discloses method for synchronizing network address translator (NAT) tables using the open shortest path first OPAQUE links state advertisement option protocol.

Crawley et al (US 5,995,503) discloses method and apparatus for providing quality of service routing in a network.

Zinin et al (US 6,820,134 B1) disclose optimizing flooding of information in link-state routing protocol.

Kalmanek, Jr. et al (US 6,711,152 B1) disclose routing over large clouds.

Weinstein et al (US 6,977,937 B1) disclose Link state information of the network that has been forwarded to the router is received and used to determine the connection in the network.
